FloorballKenya.com MVP — Frontend Page Mapping

The frontend will use a **role-based and module-based navigation structure**. Public users can access general information, while authenticated users are directed to dashboards based on their roles.

1. Overall Page Mapping

text

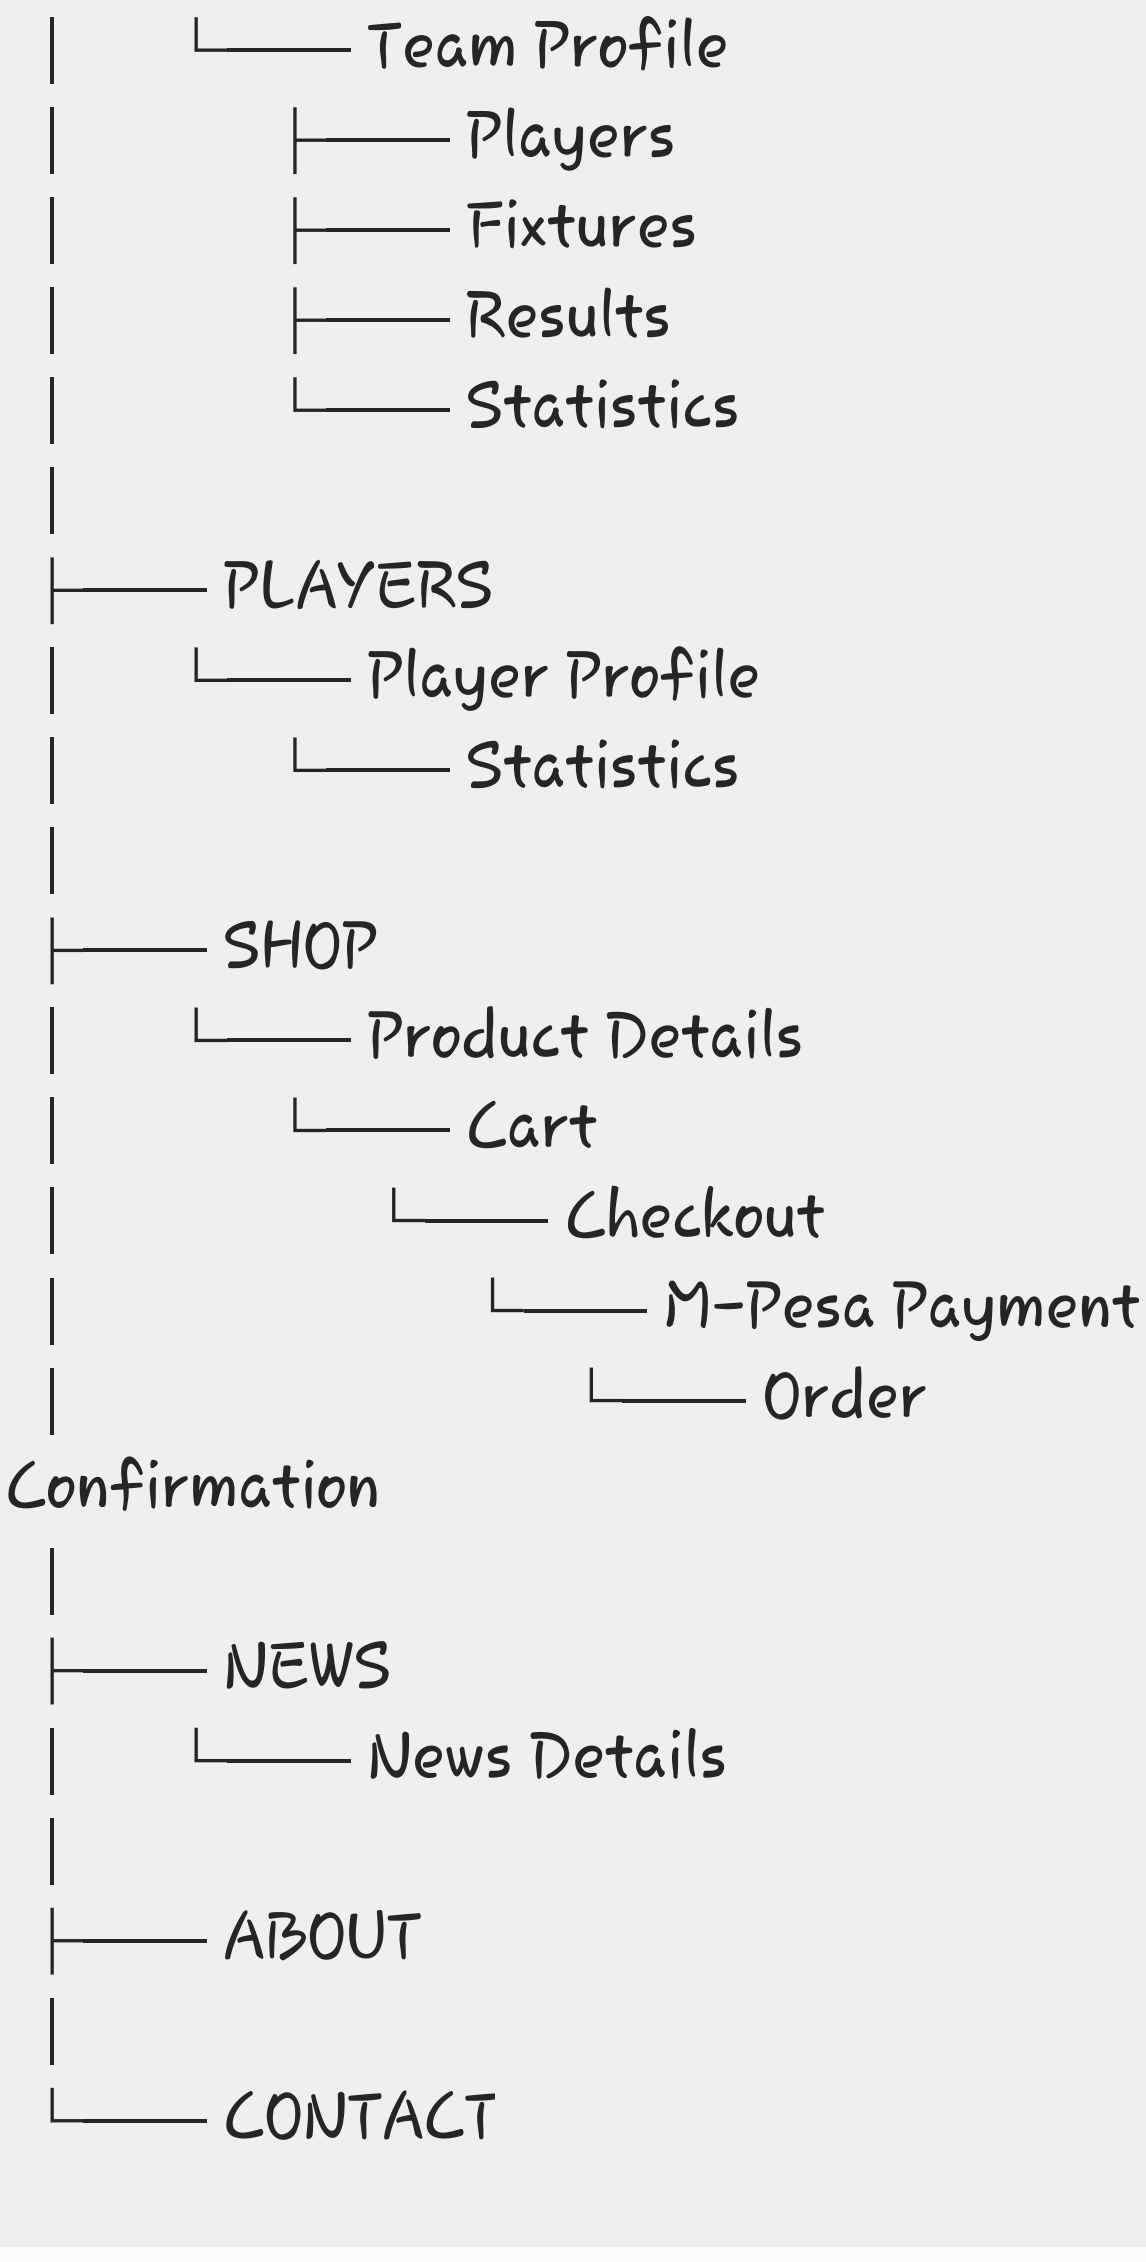

The Home Page acts as the main entry point to

---

2. Main Navigation Mapping

The main navigation will be:

```text
HOME
  |
  ├── LEAGUES
  |     └── League Details
  |           ├── Standings
  |           ├── Fixtures
  |           ├── Results
  |           └── Statistics
  |
  ├── TOURNAMENTS
  |     └── Tournament Details
  |           └── Team Registration
  |
  ├── TEAMS
```

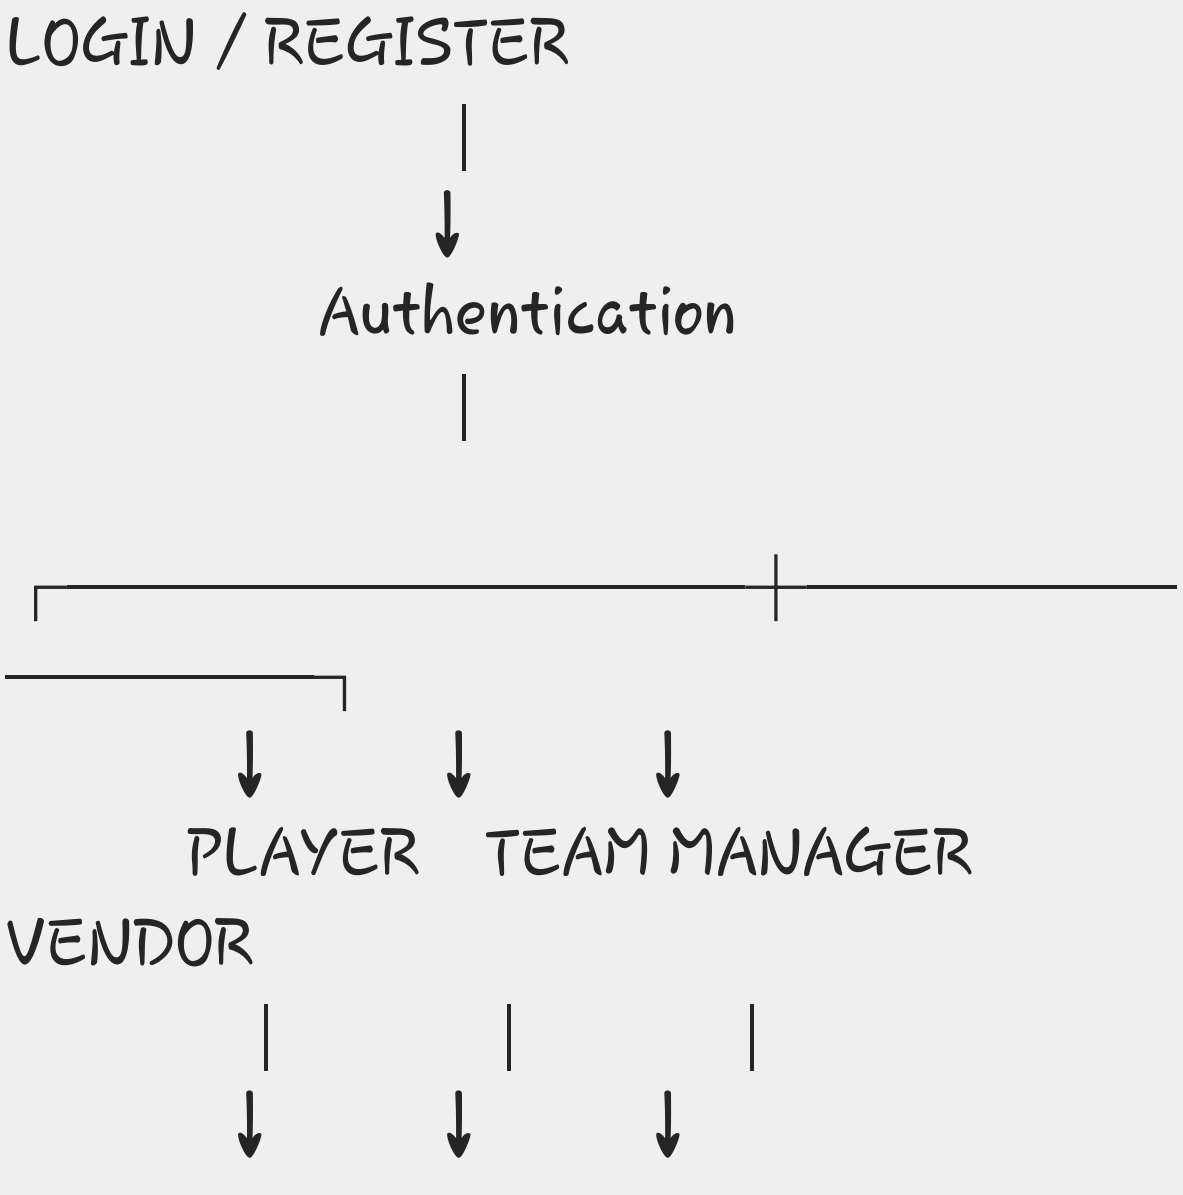

Team Profile
Players
Fixtures
Results
Statistics
PLAYERS
Player Profile
Statistics
SHOP
Product Details
Cart
Checkout
M-Pesa Payment
Order
Confirmation
NEWS
News Details
ABOUT
CONTACT

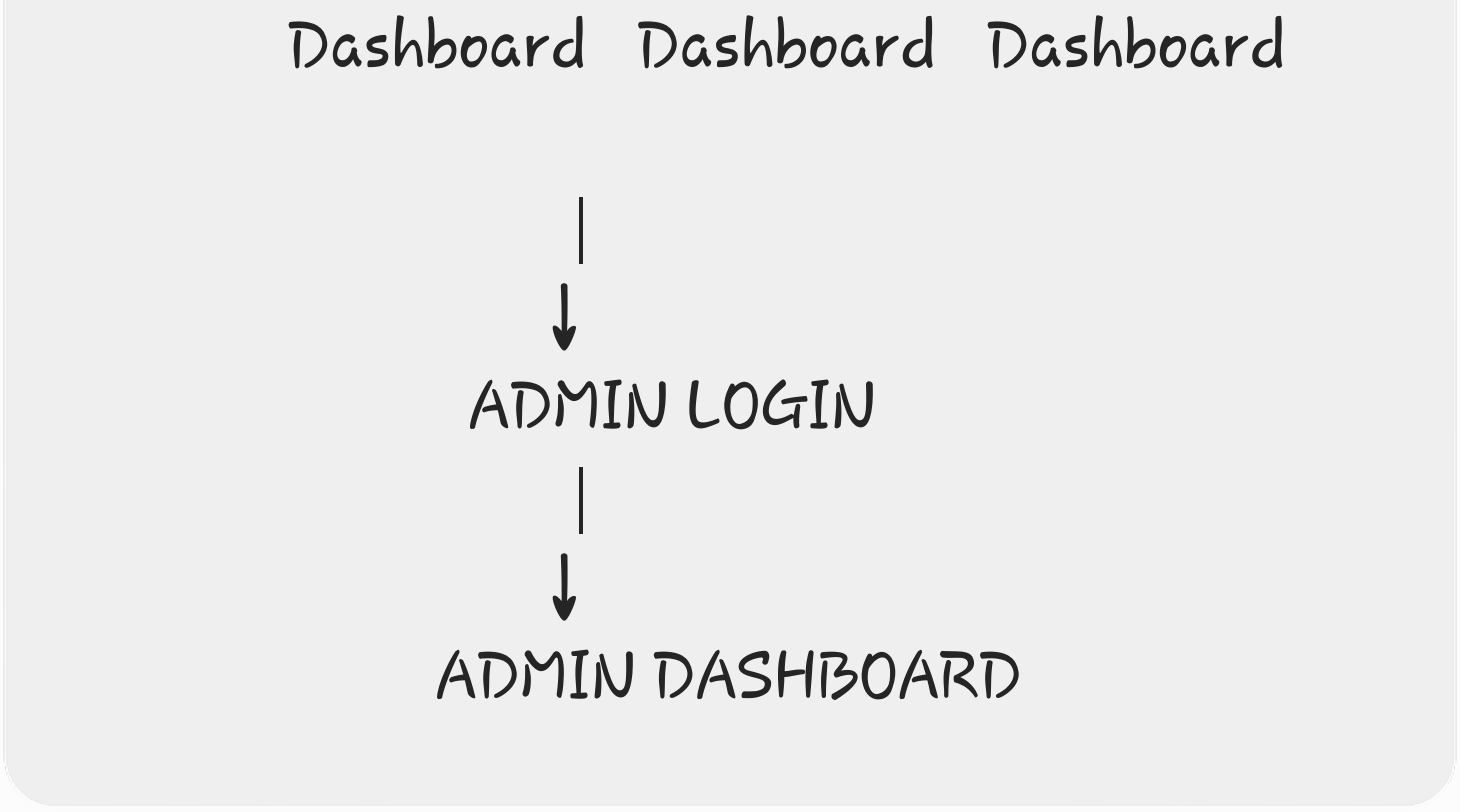

---

3. Authentication Mapping

The authentication system connects public pages to personalized dashboards.

text

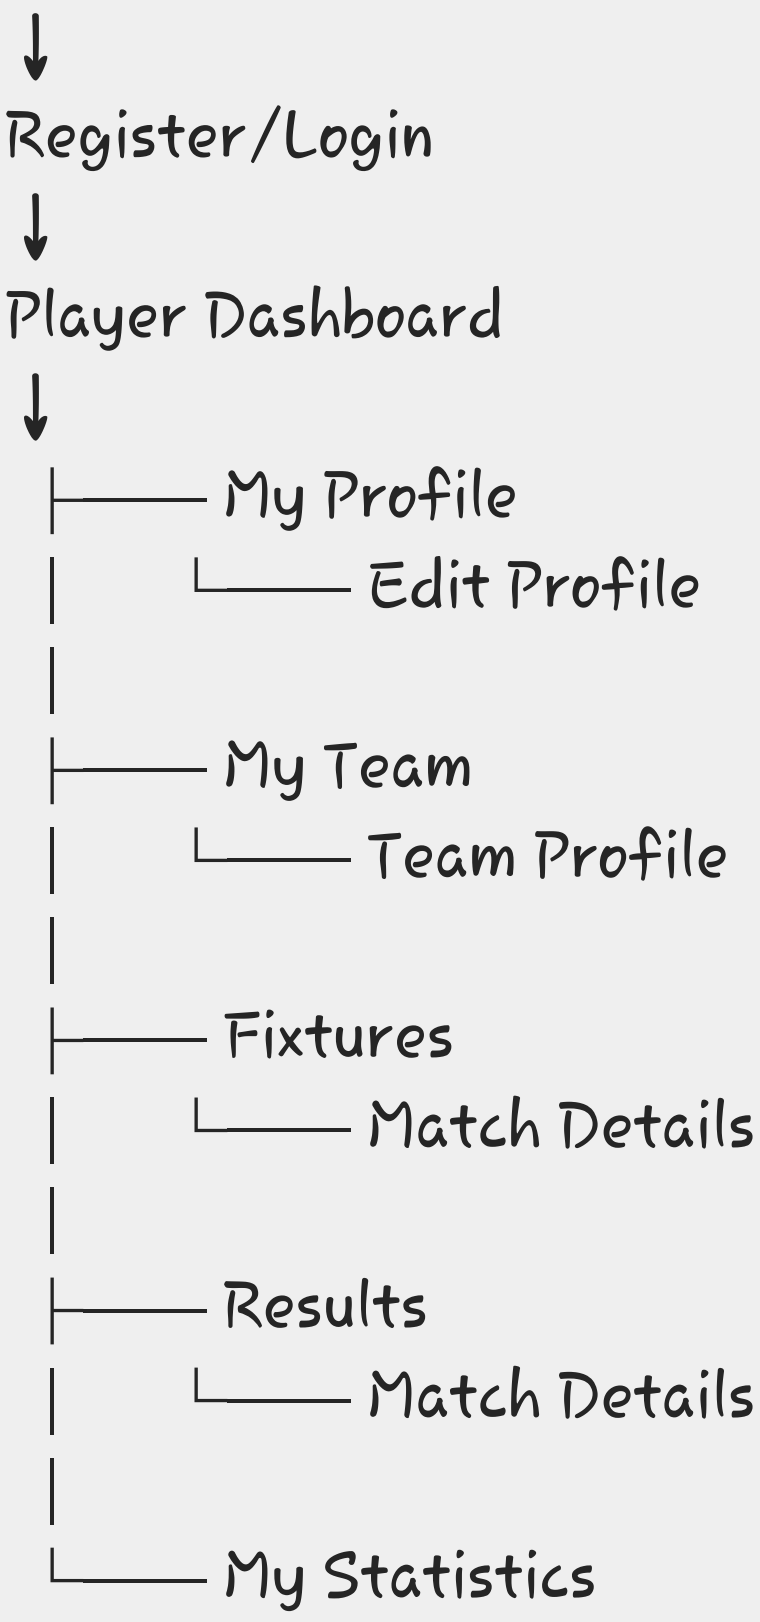

The system checks the user's role after authentication and redirects them to the appropriate dashboard.

---

4. Player Page Mapping

Player Journey

```text
Home
```

A player can also reach public information independently:

```text
Players
↓
Player Profile
↓
Statistics
↓
Team Profile
```

---

5. Team Manager Page Mapping

Team Manager Journey

```text
Register/Login
      ↓
Team Manager Dashboard
```

The Team Manager dashboard becomes the central control point for team-related activities.

---

6. League Page Mapping

The league system connects teams, players, fixtures, results and standings.

text

Important relationship

When an administrator enters a match result:

text

This is an important part of your MVP because it shows that the different frontend sections are **not isolated pages**; they are connected through

underlying database.

---

7. Tournament Page Mapping

```text
Tournaments
    ↓
Tournament Details
    |
    ├── Overview
    ├── Participating Teams
    ├── Fixtures
    ├── Results
    └── Registration
        ↓
    Team Manager Login
        ↓
    Select Team
        ↓
    Registration Form
```

```
        ↓
    Payment
        ↓
  Confirmation
```

---

8. Team and Player Relationship

The Team and Player pages will be directly connected.

```text
Teams
  ↓
Team Profile
  ↓
Team Players
  ↓
Select Player
  ↓
```

```
Player Profile
  ↓
Player Statistics
```

The reverse relationship will also exist:

```text
Players
  ↓
Player Profile
  ↓
Current Team
  ↓
Team Profile
```

Therefore, users can navigate **Team → Player** or **Player → Team**.

---

9. Marketplace Page Mapping

The marketplace follows a standard e-commerce flow.

```text
SHOP
 ↓
Product Listing
 ↓
Product Details
 ↓
Add to Cart
 ↓
Shopping Cart
 ↓
Checkout
 ↓
M-Pesa Payment
 ↓
Payment Confirmation
 ↓
Order Confirmation
```

```
↓
My Orders
↓
Order Details
```

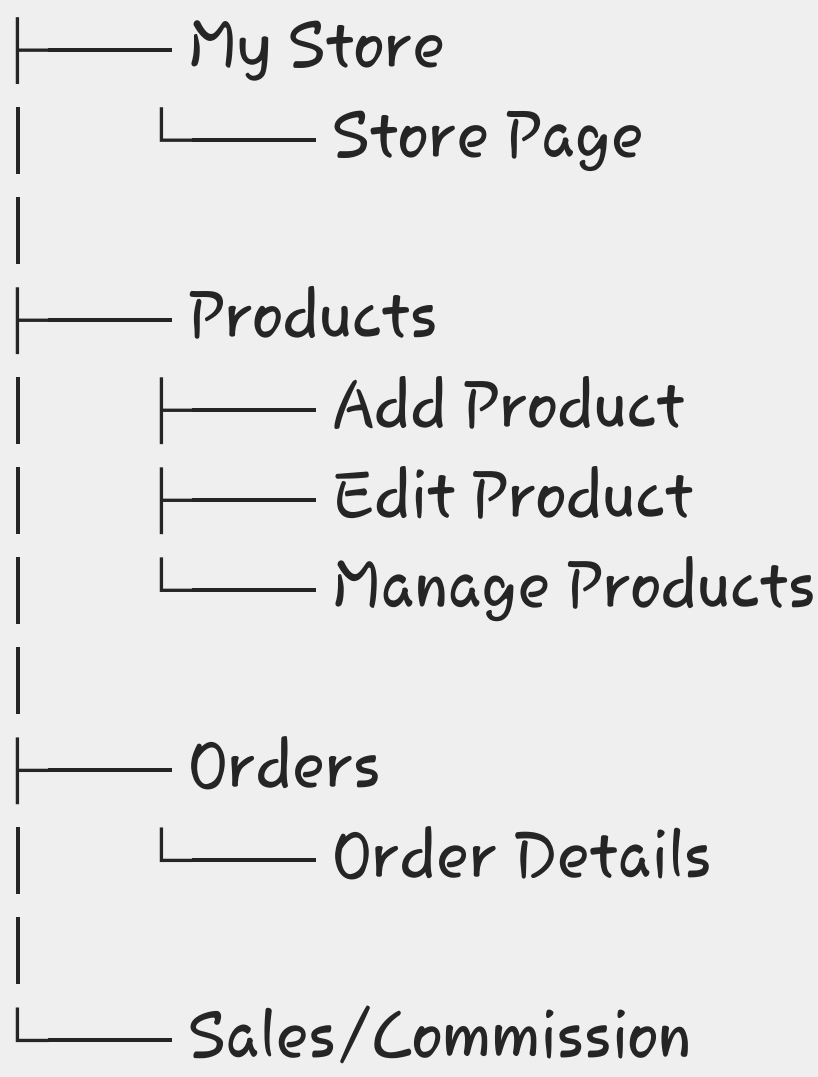

---

10. Vendor Page Mapping

The vendor frontend will be separate from the customer's shopping experience.

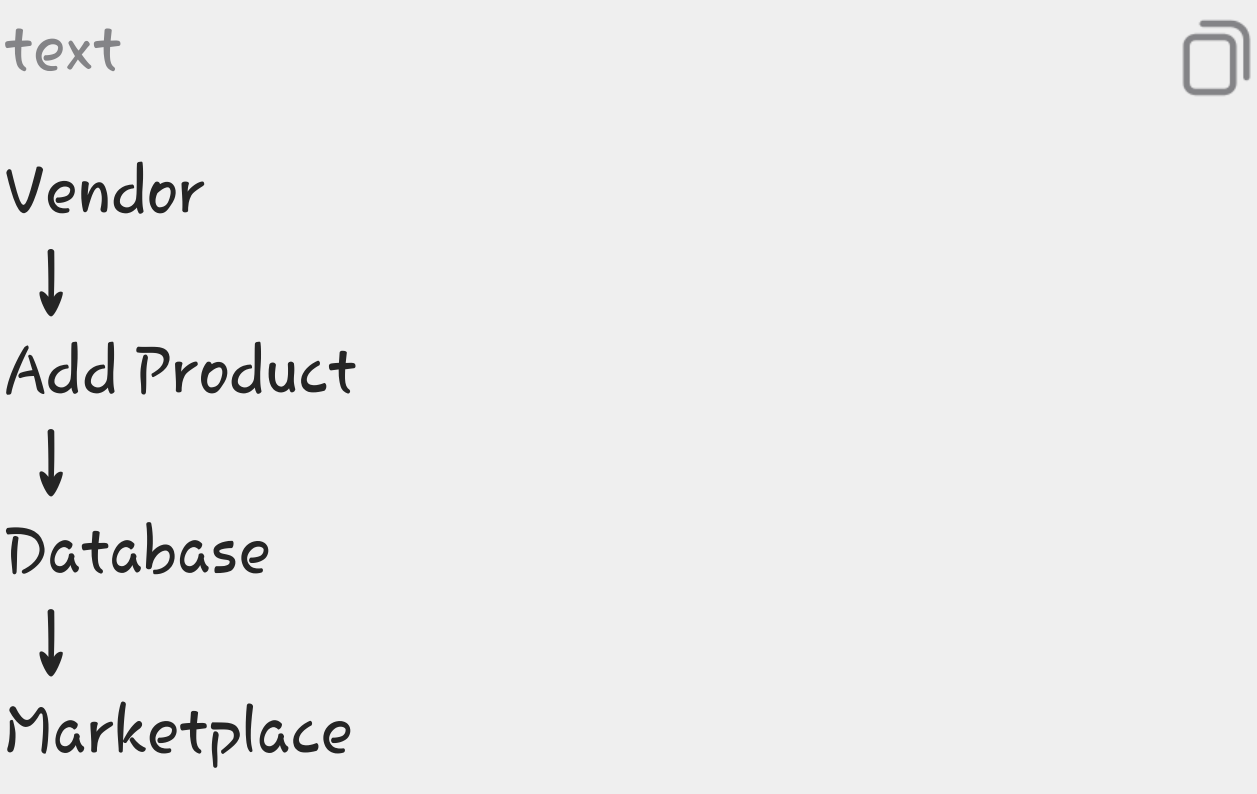

text

```
Vendor Registration
        ↓
Administrator Approval
        ↓
Vendor Login
        ↓
Vendor Dashboard
        |
```

Products created by the vendor flow into the public marketplace:

text

```
↓
Customer
↓
Purchase
↓
Order
↓
Vendor Orders
```

---

11. Customer Page Mapping

text

```
Shop
↓
Product Details
↓
Add to Cart
↓
Cart
```

```
↓
Checkout
↓
M-Pesa
↓
Order Confirmation
↓
Customer Dashboard
↓
My Orders
↓
Order Details
```

The customer's order is then connected to the vendor:

text

```
Customer
  ↓
Order
  ↓
Vendor
  ↓
```

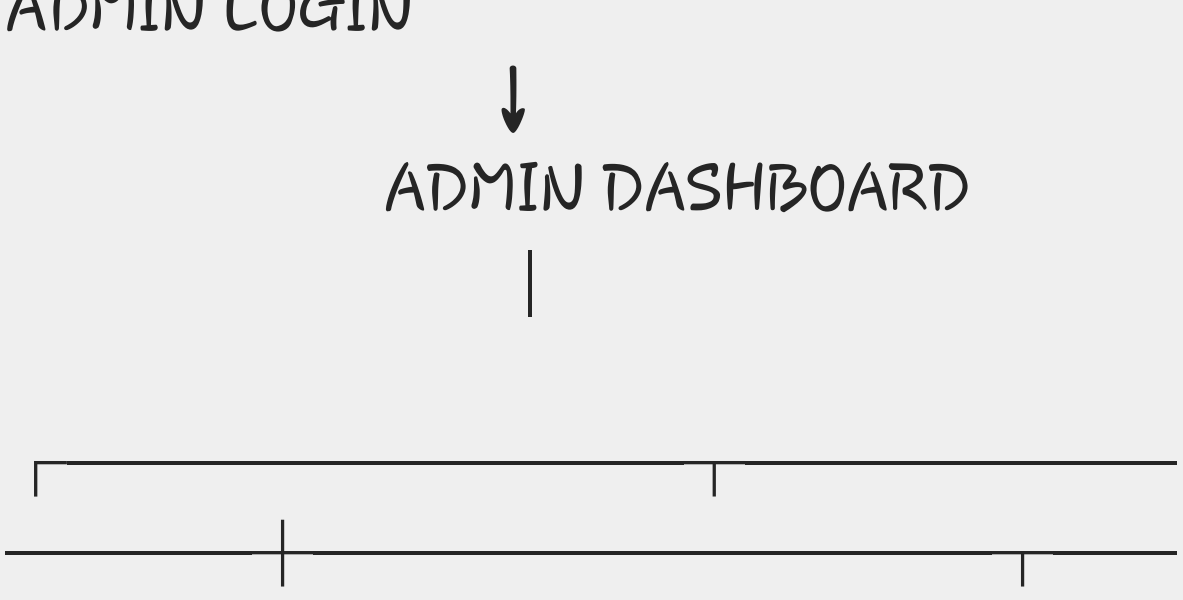

```
Process Order
   ↓
Update Order Status
   ↓
Customer sees updated status
```

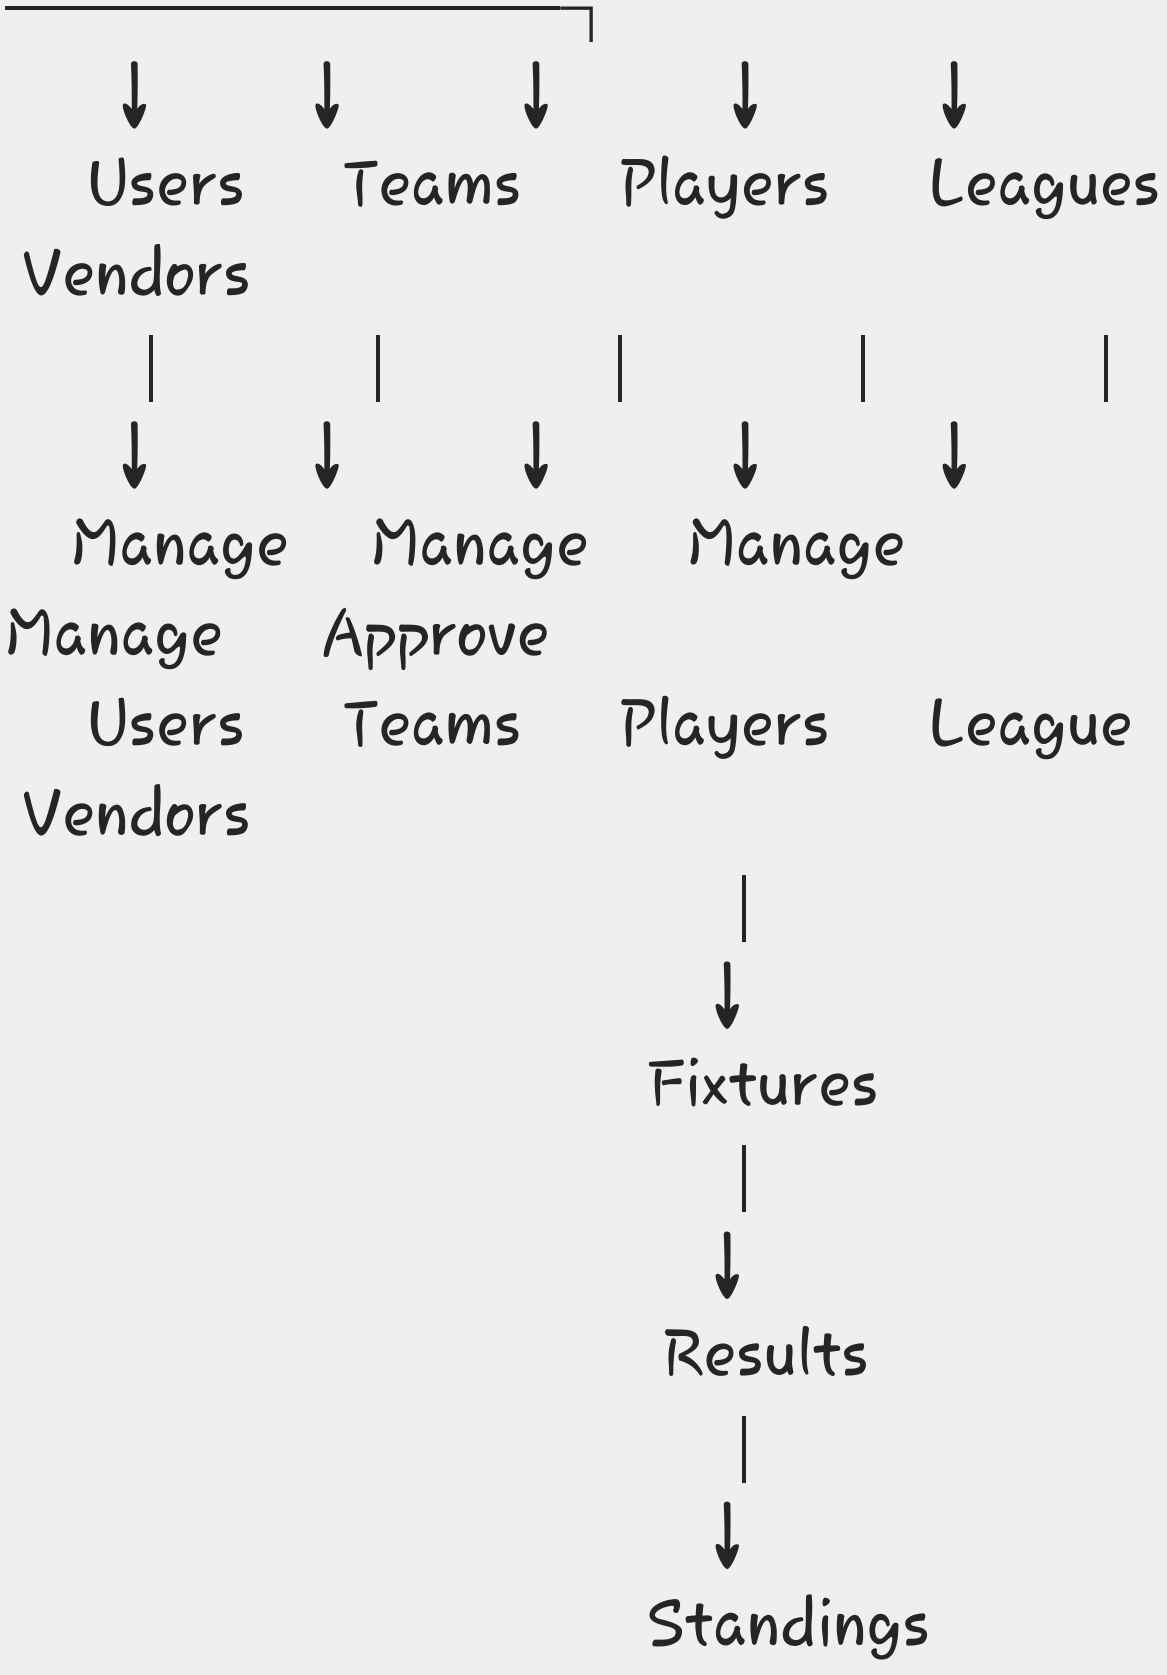

---

12. Administrator Page Mapping

The Administrator has access to almost every management module.

text

The administrator also manages the marketplace:

```text
Admin Dashboard
    |
    ├──── Vendors
    |
    ├──── Products
    |
    ├──── Orders
    |
    ├──── Payments
    |
    └──── Commissions
```

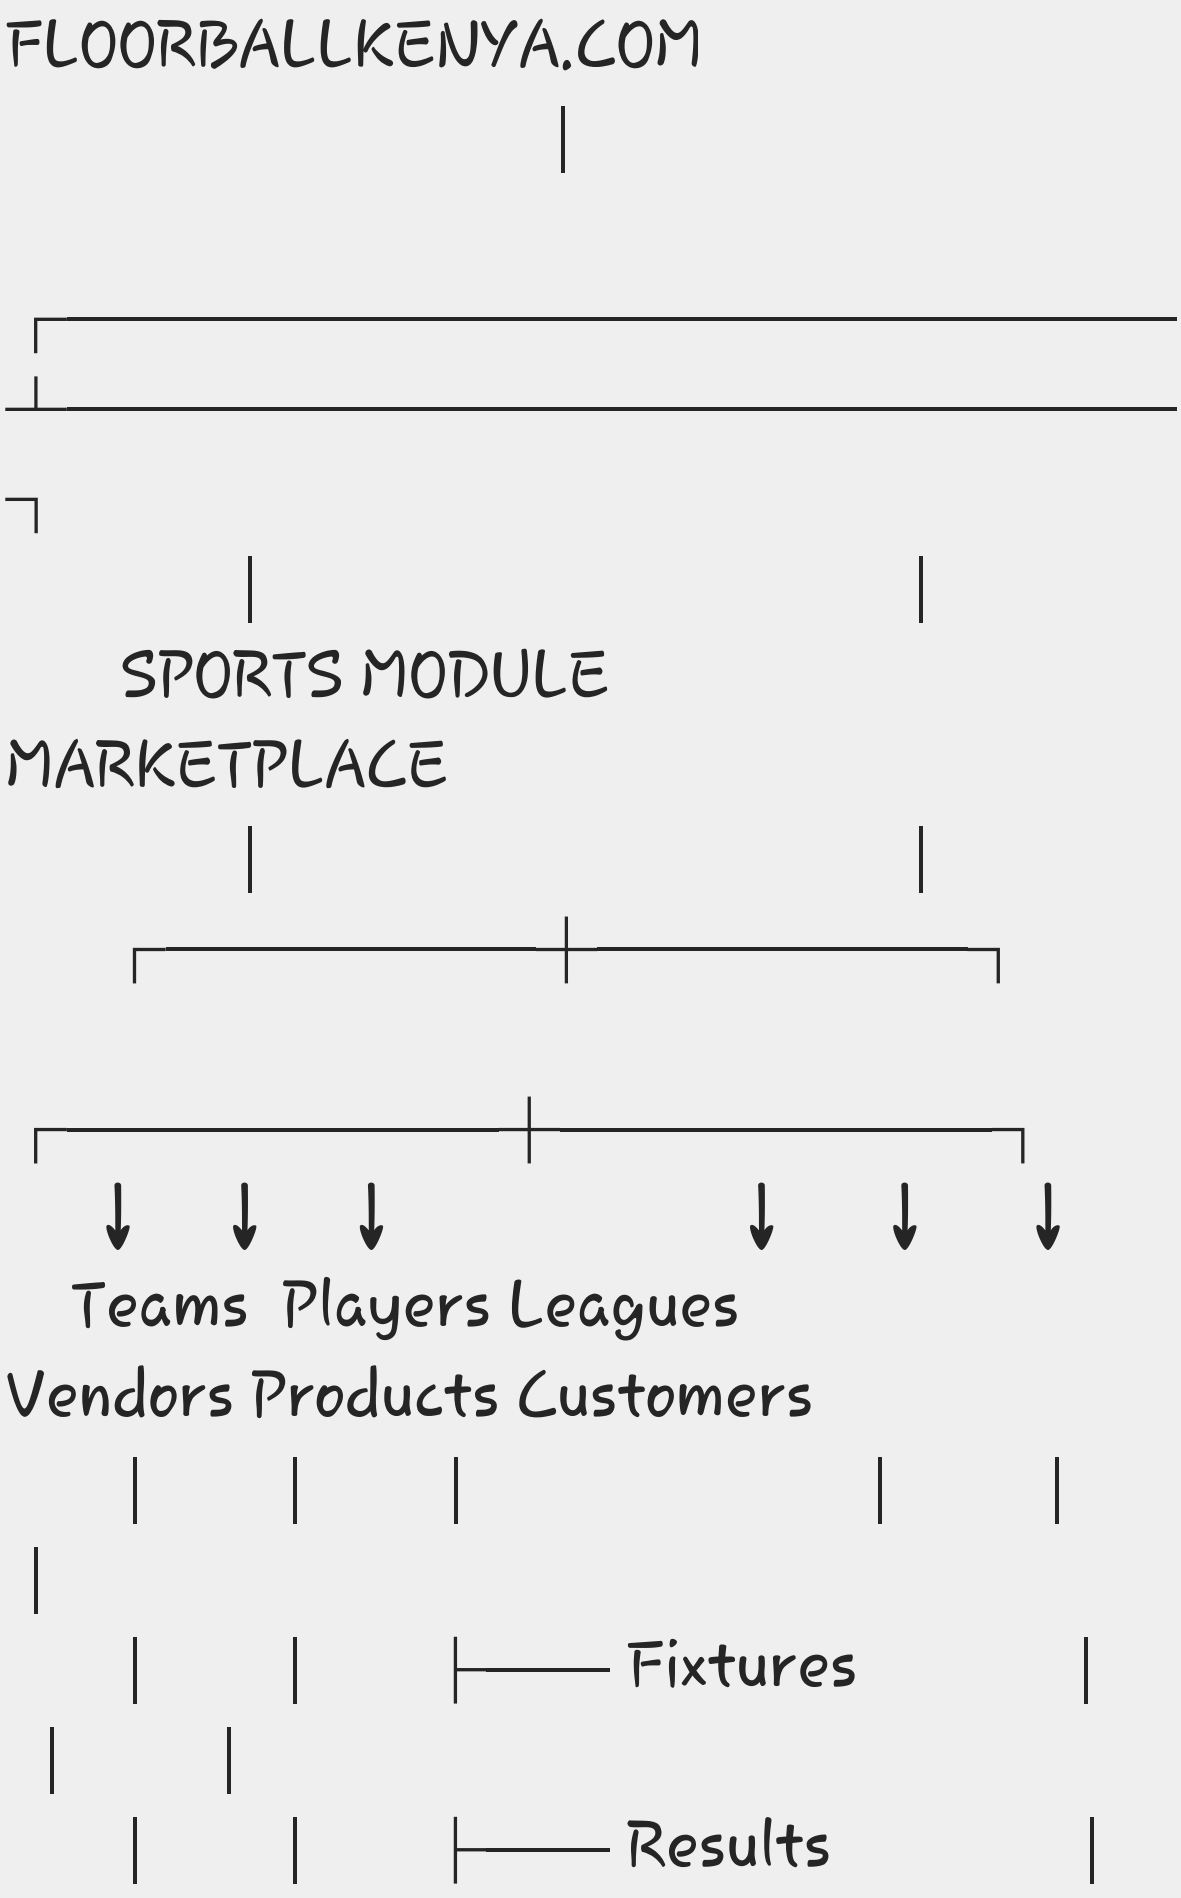

---

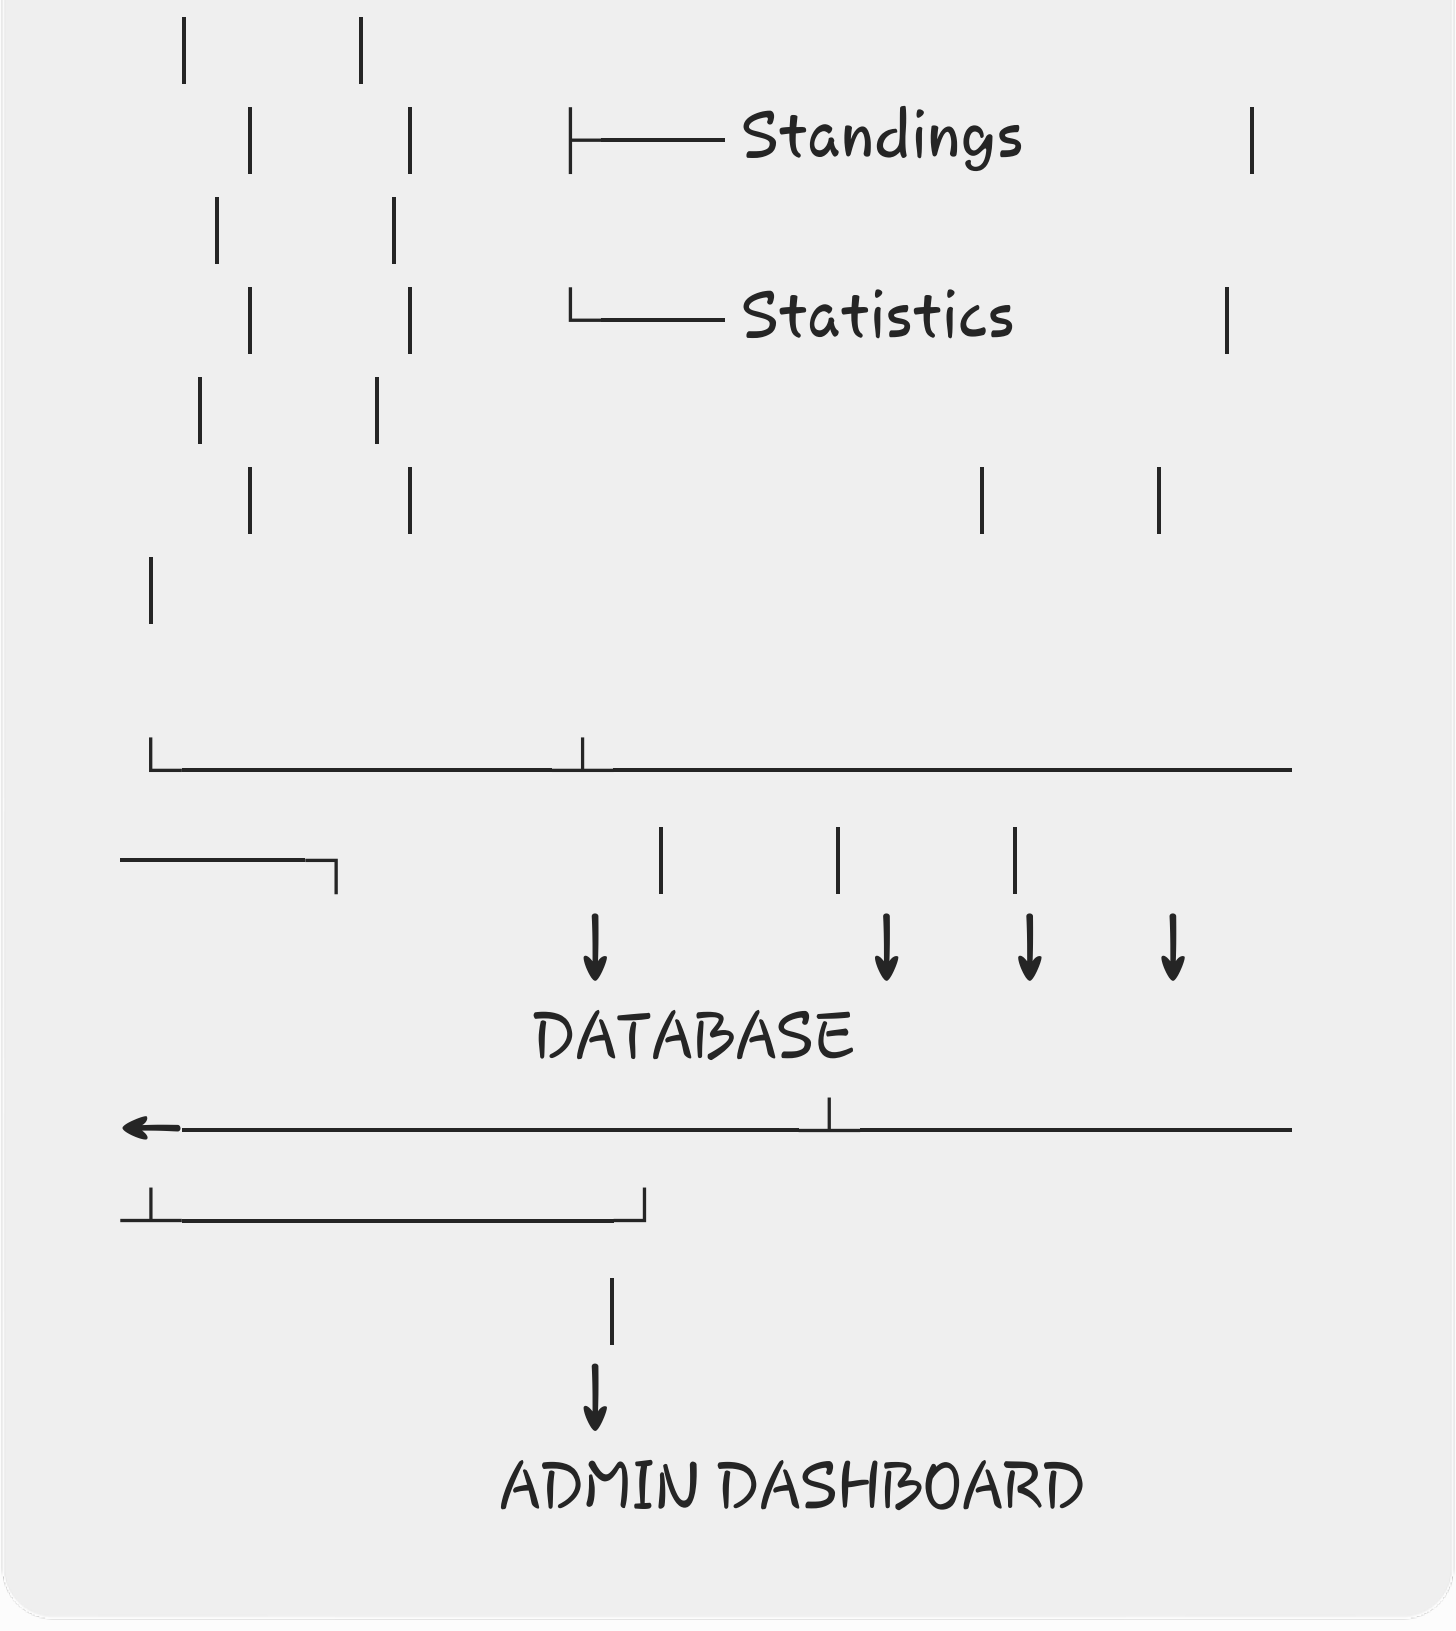

13. Complete MVP Frontend Relationship

The most important mapping can be

follows:

text

---

14. Page-to-Page Mapping Table

Page	Can Navigate To	Main User
Home	Leagues, Tournaments, Teams, Players, Shop, News, Login	Everyone
Leagues	League Details	Everyone
League Details	Teams, Standings, Fixtures, Results, Statistics	Everyone
Tournaments	Tournament Details	Everyone
Tournament	Registration,	Everyone/

Details	Teams, Fixtures, Results	Manager
Teams	Team Profile	Everyone
Team Profile	Players, Fixtures, Results, Statistics	Everyone
Players	Player Profile	Everyone
Player Profile	Team Profile, Statistics	Everyone
Shop	Product Details, Cart	Customer
Product Details	Cart, Vendor Store	Customer
Cart	Checkout	Customer

Checkout	Payment	Customer
Payment	Order Confirmation	Customer
Order Confirmation	My Orders	Customer
Login	Relevant Dashboard	All registered users
Player Dashboard	Profile, Team, Fixtures, Statistics	Player
Team Dashboard	Team, Players, Leagues, Tournaments	Team Manager
Vendor Dashboard	Products, Orders, Store, Sales	Vendor

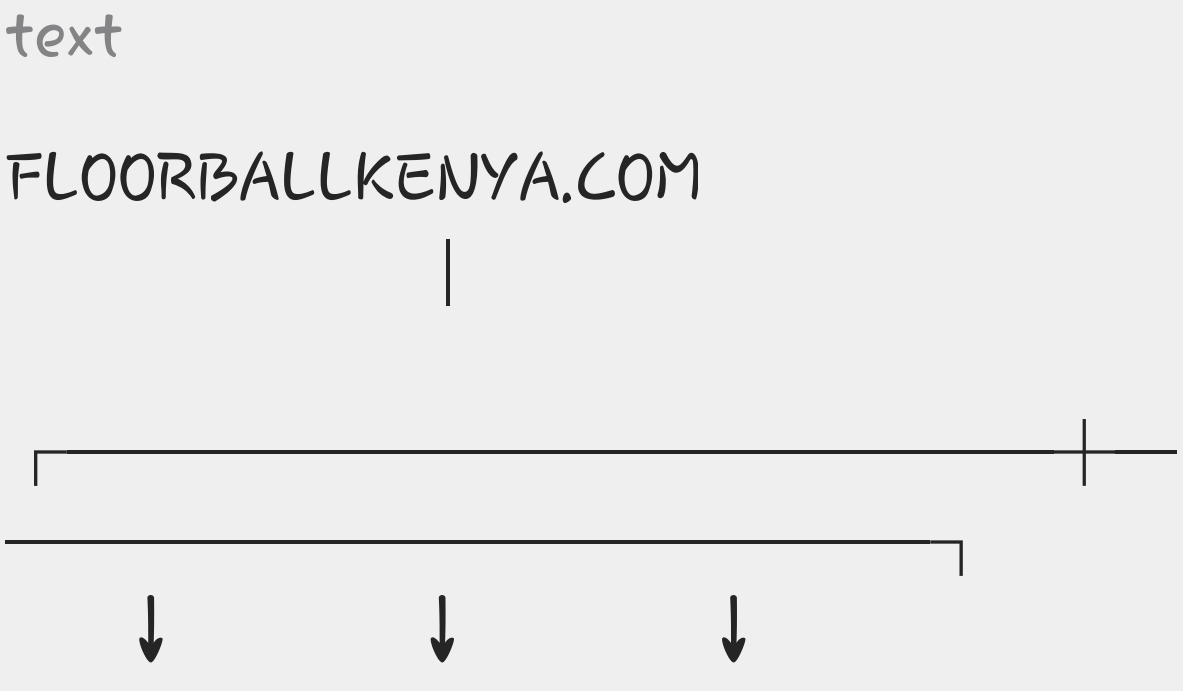

Admin Dashboard	All Management Modules	Administrator

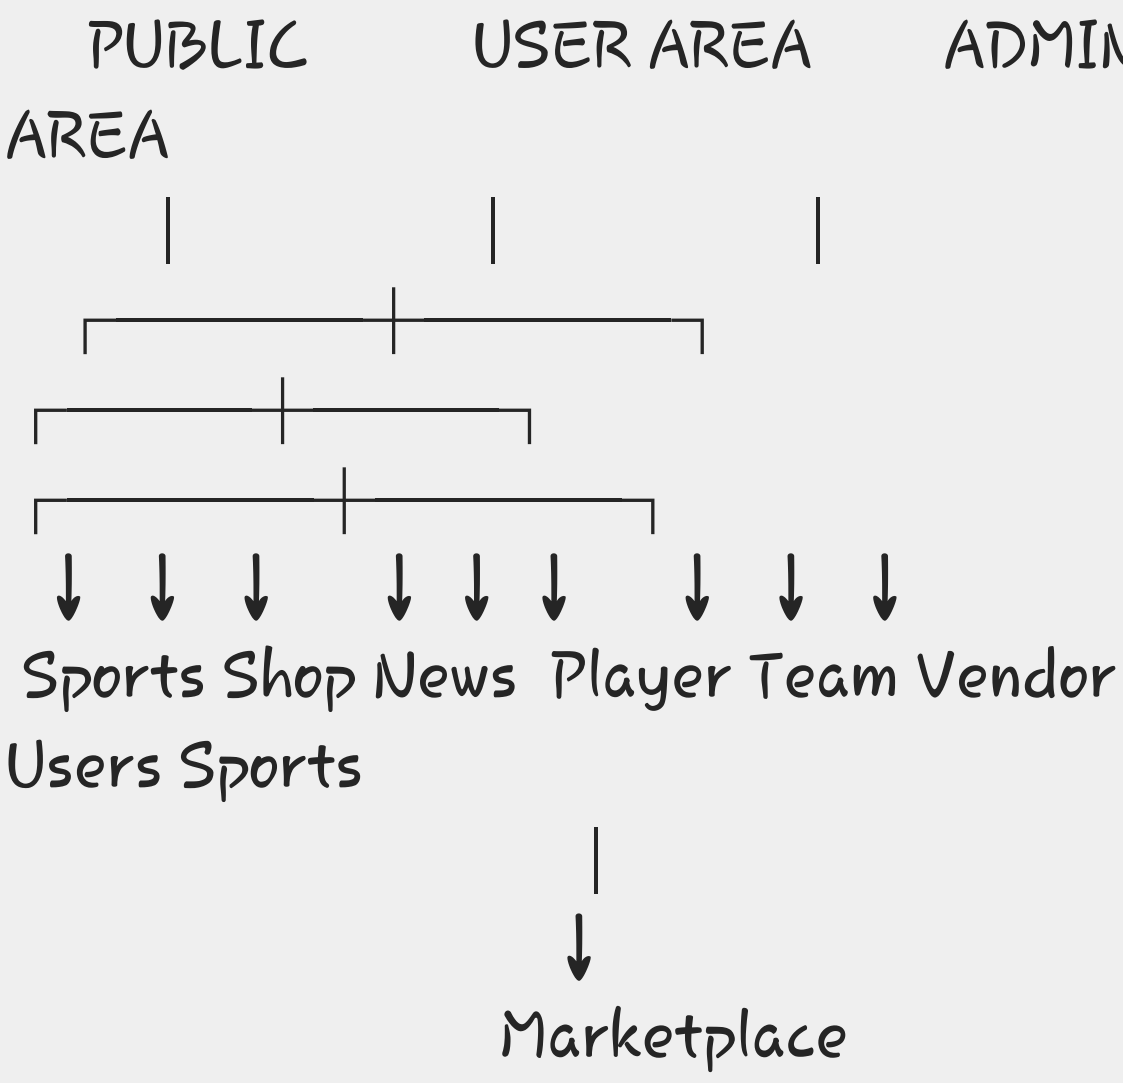

---

15. Frontend Architecture for the MVP

A clean way to organize the frontend is into **five major areas:**

text

The key idea

The pages should **not operate independently.**

For example:

Administrator enters a match result

→ Match database is updated

→ Team statistics change

→ Player statistics change

→ League standings change

→ The updated information appears on:

- Match Details
- Team Profile
- Player Profile
- League Details
- League Standings
- Homepage

Likewise:

Vendor adds a product

→ Product enters database

→ Product appears in Shop

→ Customer adds it to Cart

→ Customer checks out

→ M-Pesa payment is processed

→ Order is created

→ Vendor sees the order

→ Customer sees the order status.

That interconnected structure is what makes FloorballKenya.com an actual system rather

simply a collection of webpages.
